

1960S SWIMMING POOL

Receives Complete Renovation

THE PROJECT

Built in the 1960s, the concrete swimming pool featured an internal Marbelite finish and tiled waterline decoration. The client requested a complete renovation of the pool and adjoining buildings, including the addition of new shower area and steam room facilities. The project scope involved installing an automated pool cover system with underground storage chamber. Mosaic tile accents in green were incorporated along the waterline, complemented by contrasting bands and borders.

The filtration system was upgraded with new UV pre-filtration, multi-cyclone separators and sand filters. Heating was achieved via a dedicated air source heat pump installation. The pool surrounds were finished with porcelain tile. A custom stainless steel handrail was fabricated to assist with safe pool entry and exit. Together, these improvements brought a modernised aesthetic to this classic swimming pool.
