

ELEGANT POOL RENOVATION

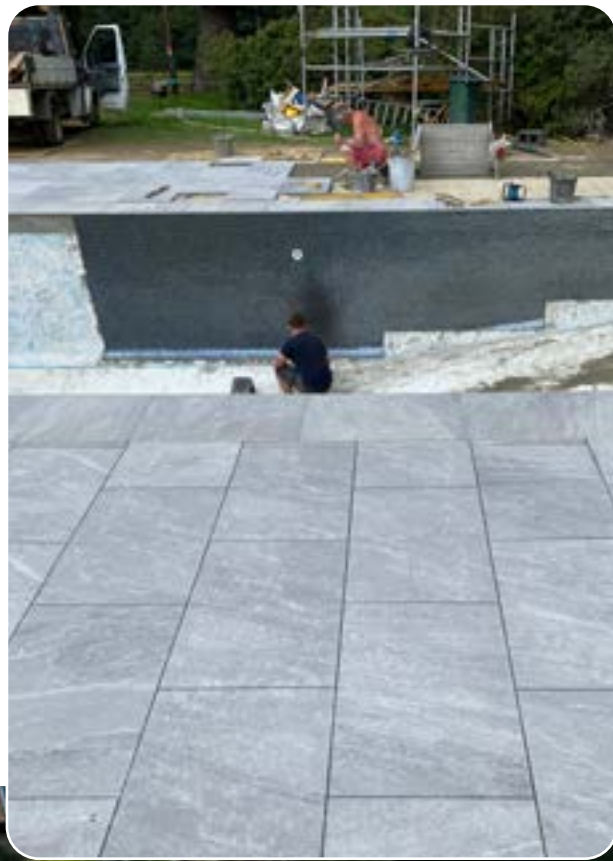

with Modern Improvements

THE PROJECT

Our clients approached us with a vision to transform their aging concrete marbleised pool into a modern place to relax and entertain. Their primary goals were to update the curved stepped end for a more contemporary design and incorporate an automated, in-ground, slatted cover for convenience and safety. The existing pool featured a large curved stepped end, which, while functional, lacked the refined look our clients desired. Additionally, the absence of an automated cover system meant manual effort was required to secure the pool when not in use. Our experienced team worked closely with the clients to understand their preferences and devise a comprehensive renovation plan.

First, we carefully deconstructed the curved stepped end, paving the way for a new, streamlined design. We then installed an in-ground slatted cover system, allowing our clients to effortlessly open and close the pool with the touch of a button. To complement the modern updates, we resurfaced the entire pool with stunning high-line mosaic tiles in a contemporary colour palette. This not only elevated the pool's visual appeal but also enhanced its durability and low-maintenance properties.

In addition to the stunning visuals, our renovation included a full overhaul of the pool's filtration system, ensuring crystal-clear water and optimal energy efficiency for years to come. Finally, we replaced the surrounding paving, creating a seamless flow between the pool and its surroundings, further enhancing the overall aesthetic.

From conception to completion, our team's attention to detail and commitment to quality ensured a seamless and stress-free renovation process. Our clients now enjoy a truly modern pool that not only enhances their outdoor living experience but also adds significant value to their property.
