

# IRREGULAR SHAPE POOL INTO A SLEEK MODERN DESIGN

## Transformation

### THE PROJECT

Renovating existing pools with irregular shapes can present unique challenges, especially when it comes to finding compatible automatic pool covers. Our team recently tackled a project where the clients' outdated, irregularly shaped pool proved too costly to operate and maintain. After a thorough assessment, we proposed a comprehensive solution – constructing a new reinforced concrete pool within the boundaries of the existing structure.

With the client's approval, we embarked on this innovative approach, seamlessly integrating an in-ground slatted automatic cover system into the new pool design. To enhance the overall aesthetic appeal, we installed new top-line mosaics and constructed a modern step system within the pool. The transformation is unmistakable, with the original pool's unconventional shape contrasted against the sleek, streamlined design of the new pool within.

To Ensure optimal water quality and energy efficiency, we incorporated a state-of-the-art filtration system, complete with UV and sand filtration system. Heating for the pool is provided through a combination of an existing oil-fired

boiler and a newly installed air-source heat pump, offering a cost-effective and environmentally friendly solution. To complement the pool renovation, we installed new paving surrounds and constructed attractive brick retaining walls, creating a cohesive and inviting outdoor living space.
